WordPress: Content and Conversion

- ▶ CMS is based on some simple operations like
 - ▶ Create a post
 - ▶ Store in some storage system like file or database
 - ▶ Display formatted output
- ▶ CMS handle the creation, storage, retrieval, description & publication of content
- ▶ WordPress stores content in raw form
- ▶ This raw formed data can be run through templates

Directory & File Structure

- ▶ 3 default directories are: wp-admin, wp-content & wp-include
- ▶ Core files are present in wp-admin & wp-include
- ▶ The wp-content directory contains all custom files created by user including themes, plugins & media
- ▶ Also contains code that controls content manipulation & presentation in WordPress

Directory & File Structure

- ▶ Do not modify core files otherwise it will result in unstable website
- ▶ In general do not modify any files in default directories
- ▶ Important core files in WordPress directory are
 - ▶ wp-config.php
 - ▶ .htaccess file
